

TANDBERG SOLUTIONS

First Responders

Visual communication delivers significant benefits to organizations concerned with public health, security and safety. In a crisis situation, a first responder's initial actions and the dissemination of accurate information is vital. A real-time, interactive communications tool delivers incalculable value by facilitating improved coordination and information sharing, early warning, threat analysis and crisis site training.

The TANDBERG Solution for First Responders is an integrated video solution for emergency response units and their command and control elements.

SOLUTIONS FOR MISSION CRITICAL-COMMUNICATIONS

Incident Assessment: TANDBERG solutions enable remote emergency communications, including bio threat assessment and identification. Specialists can identify potential hazards and evaluate the needs in the field without sacrificing valuable time.

Remote Triage: Video connections with local hospitals and medical specialists enable doctors to evaluate the conditions and prioritize treatment for the injured.

Tele-healthcare: With video systems, field personnel can diagnose and treat onsite with the supervision of a specialist.

Mass Communication: Government officials, security agencies and military personnel can address the public without leaving the pulse centers where they are needed most.

Training: The heightened threat of terror has caused a new look at the way task forces, first responders and medical personnel are trained. When seconds matter, the time it takes personnel to return to base from an off-site training can mean lives lost. With TANDBERG solutions, emergency response teams can be right where they need to be in case of an emergency and still receive the critical training necessary to handle crises.

LIVE VIDEO INTERACTION AT THE CRISIS SCENE

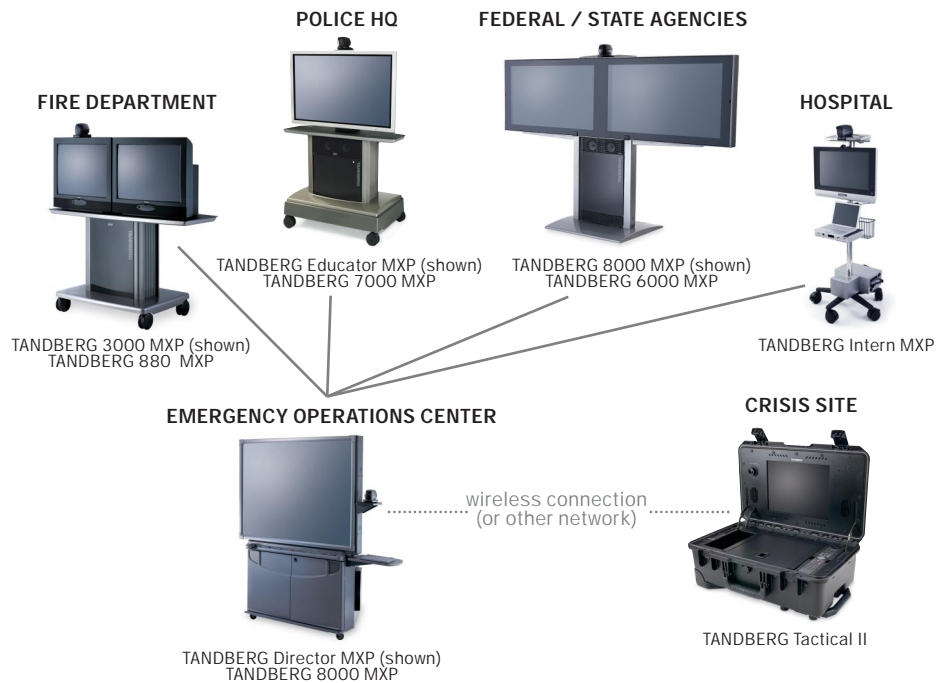

Built into a briefcase, the TANDBERG Tactical II arrives first at the emergency scene. First responders to the crisis location effectively relay the sights, sounds and details of the situation, transmitting live video of the scene using the remote camera and receiving life-saving instructions in return. At the emergency operations center, one of the large room TANDBERG systems, such as the Director, 6000, or 8000, allows up to 16 crisis managers to analyze the information being sent from the first responders and provide guidance accordingly, ensuring crisis teams accumulate and disseminate information fully.

First Responders

VISUAL COMMUNICATION KEEPS DECISION MAKERS CONNECTED

Every agency in a community should be ready to respond to an emergency. Video communication provides the most complete and accurate picture of a scene, and enables two-way interaction for even greater assurance.

BENEFITS OF THE TANDBERG SOLUTION FOR FIRST RESPONDERS

- Standards-based for easy integration into existing solution
- Scalable solution for growth
- Easy-to-use functionality, important during a crisis
- Built-in AES Encryption for secure communications, KG194/KIV-7 capable
- Multiple network interfaces in one box — V.35, ISDN, IP, etc.
- Compatible with secure DoD networks

TANDBERG's proven technology leadership and mission-specific designs make TANDBERG the vendor of choice for civilian and government agencies standardizing their video communication protocol.
